CAMEO and EWI

By Mia Yost-Kelly

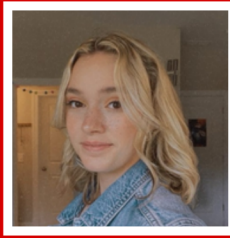

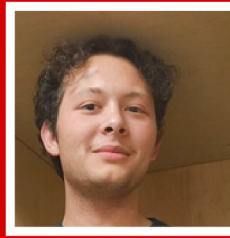

Council for the Advancement of Minority Engineering Organizations (CAMEO) is the umbrella organization for the minority engineering organizations here at Virginia Tech. Some of the CAMEO include:

- AISES (American Indian Science and Engineering Society)
- AWC (Association for Women in Computing)
- NSBE (National Society of Black Engineers)
- SASE (Society of Asian Scientists and Engineers)
- SHPE (Society of Hispanic Professional Engineers)
- SWE (Society of Women Engineers)

CAMEO works with these organizations to hold an annual event called Evening With the Industries (EWI). EWI is an amazing opportunity to network, socialize, and be recruited by a diverse assembly of companies attending the CAMEO CareerFest- who are eager to recruit engineers from Virginia Tech. Hors d'œuvres and light refreshments will be provided! Mark your calendars for Sunday, February 18th from 4-6 PM at the Multipurpose Room in the Graduate Life Center. Scan the QR code to register now!

Selling Yourself *By Gabe Rosado*

Your resume is a lot more than just places you have worked; it is a collection of your professional experiences. Fun fact, you can put personal projects, relevant courses, and other skills on your resume. Especially in your first year, it is important to take full advantage of the resources around you.

For example, the inVenTs Studio is an excellent place to work on in-class or personal projects. Projects that can serve to bolster your resume and will give you that extra topic to discuss in an interview. ENGE 1215 and ENGE 1216 will expose you to programs such as MATLAB, Excel, and SolidWorks, all of which are great programs to be proficient in. In addition to being familiar with computer programs, there are other skills that are equally marketable to companies and design teams. Such as soldering, CNC (subtractive manufacturing if we are being professional), and even 3D Printing (additive manufacturing). The big takeaway is that you are only as marketable as you make yourself, and that is not necessarily what you say but how you say it.

Taylor Swift and the NFL *By Morgan Peterson*

Travis Kelce and Taylor Swift, a relationship no one had on their bingo cards for this year, have been across headlines and TV screens nationwide. Without a doubt, the couple has brought people together. It's like High School Musical, people who had only ever sat at the music/musical theater table are now mingling with the jocks. We have seen floods of Swifties who have never watched a game in their life tuning in to watch the Chiefs play, and people who only know the name Taylor Swift from their nieces and nephews are now becoming familiar with the popular artist.

Like most things, there is a bit of controversy surrounding the pair, mostly from the NFL fan base. People have stated that "Taylor Swift is ruining football" and that "They show her more than the football." In my opinion, the impact Taylor has had on the NFL can be seen in Travis Kelce's stats and the increased attention that has been brought to the sport's biggest event, The Super Bowl. It has been reported by NPR that Taylor has brought an estimated \$330 million worth of attention to the team and the NFL. Despite whether or not you are a Swiftie, I believe that the impact she is having on the NFL is a positive one, as this may be one of the most anticipated NFL games to date.
