

# Galipatian Station

WHILE YOU PEE IN LEE

Friday, November 10th – Friday, November 17th 2017

COMPILER

**Meghan Eck**  
**Mechanical Engineering**  
**Sophomore**

## Professors to Take

**Joshua Artz**  
**Civil Engineering**  
**Sophomore**

If you're like me, you have probably already started to think about your schedule for next semester. More importantly, you are probably thinking about who you would like to have a class with. While having a certain teacher does not guarantee that you will get an A in the class, you may find that certain teachers better suit your needs with their particular teaching style. Here are just a few teachers for your classes that most students tend to favor.

### Physics 2305/2306

I had Professor Nelson for PHYS 2305 and I found that he did a very good job at ensuring his students are well prepared for all of the exams in the class. He always goes over multiple examples in class, all of which are similar to the types of questions that appear on the exam. In addition to that, he usually does small experiments that display key concepts to help you visualize what is going on in a given problem. In addition to Nelson, most others would recommend Khan for both the PHYS 2305 and 2306 class.

### Linear Algebra (MATH 2114)

If you happen to be taking Linear Algebra next semester, Professor Hagen is a good professor to have. Most

people may not be hyped when they find out she makes all of her students record videos explaining how to solve a problem. However, I found this to be extremely helpful in making sure I understood the concepts demonstrated in class. Being able to explain how to solve a problem is just as important as being able to get the right answer. In addition to this, Professor Hagen (or Susan, as she prefers to be called) genuinely cares about all of her students and maintains a pretty casual environment. She also does her best to make her way around the class while you are working on problems to answer any questions you may have.

### ESM Classes

If you have talked with anyone who has taken any ESM class such as Statics or Dynamics, chances are, you have probably heard the name Chang thrown around. I can attest that he is as good as everyone makes him out to be. He does an excellent job at explaining not only how to solve a problem, but how to approach one that may seem rather challenging. His in-class examples as well as his homework assignments cover just about everything that will be on his tests, meaning you will always be well prepared for an exam (as long as you take the time to study). Definitely be on the lookout for him when you are signing up for classes such as Statics, Dynamics, and Deforms.

Like I said before, just having one of these teachers will not ensure that you are going to pass the class with an A. You still have to put in a lot of hard work and dedication. However, these teachers will make sure you enjoy coming to class and that you stay engaged the entire time.

# A Thanksgiving Do and Don't

**Deionjalei Miller**  
**Chemical Engineering**  
**Sophomore**

We are finally to the point in the semester where we are only a few days away from our long-awaited

Thanksgiving Break (woohoo!!!) We are

close to the finish line and this break gives us a chance to regroup and motivate ourselves to finish the semester strong. As you embark on your stress free week-long journey filled with turkey comas and relaxation, there is a Do and a Don't that you should keep in mind.

## Do

### 1. Destress, rest, enjoy family time and treat yourself

Even though you have tests and a ton of assignments waiting for you once you get back, don't be afraid to take one day off where you can just relax, binge watch Netflix shows, go shopping etc. and just enjoy yourself. All work and no play is never a good combination, so be sure to have some fun on your break.

# Student Discounts

**Meghan Eck**  
**Mechanical Engineering**  
**Sophomore**

As many of us know, college is not cheap. Everyday a hungry college student is forced to eat cheap ramen on the floor of their room because they can't afford anything

better and their chair is covered in clothes they don't have the money to wash. Help a college student in need: Inform them of the ample services that offer a discount for students.

(All rates seen here are monthly, and don't include tax)

## Amazon -

If you sign up with a student email, you can get a 6-month free trial of Amazon prime. After the trial is up, college students will have to pay, but at a discounted price of \$5.49. More info can be found at <https://www.amazon.com/gp/help/customer/display.html?nodeId=201895520>

## Spotify + Hulu -

With this offer, you can get Spotify Premium, along with Hulu Limited Commercials, for the old Spotify for students discounted price of \$4.99. Basically, you get two services for

Happy Thanksgiving! May your day be filled with lots of family, food and mass text messages!

user card

## Don't

### 1. Spend your Whole Week Doing Nothing

I get it. When it is time for you to go on break, you break to the max. Unfortunately, your deadlines and test dates don't take a break. If you let your brain go on vacation for a whole week, it will be difficult to get back into "go mode" once you get back. Make sure you are stimulating your mind and staying abreast with what material you are responsible for in each class during your break. Look over your notes even if it's only a quick 10- 20-minute review.

Enjoy you break Hokies and keep these tips in mind!

the price of one. More in can be found at <https://www.spotify.com/us/student/>.

## Apple (and others!) -

Fans of Apple products may be excited to know that as a student, you can get a discount on laptops and other products when you order online. You can also get a discounted rate of \$4.99 for Apple music. More info can be found at <https://www.apple.com/us-hed/shop> and <https://support.apple.com/en-us/HT205928>.

Apple isn't the only company to offer student discounts. Microsoft, Dell, Lenovo, and other tech offer discounts on their products for students.

Only you can prevent destitution. Call today at 1-800-Feed-Them (disclaimer: not a real phone number)
