## Binge-Worthy TV Shows

**Joshua Artz**  
Civil Engineering  
Sophomore

You have all heard of Game of Thrones and Stranger Things (I hope), and, while those are fantastic TV shows, I am here to talk about some excellent shows that may have flown under your radar.

### Homeland

This show centers around a CIA intelligence officer, Carrie, who believes that a recently returned American Prisoner of War has started working for Al Qaeda, and is planning on carrying out a terrorist attack against the United States. However, no one believes her claim, and her history of bipolar disorder does nothing to help her gain any credibility. This high-octane show is guaranteed to keep you on the edge of your seat throughout the show, never knowing who to trust or when the next attack will occur. While the later seasons do drift away from the initial premise, this is definitely a show to check out if you like any kind of crime thriller. Check out the first 5 seasons available on Hulu.

**Mr. Robot***society*, whose main goal is focused on tearing down a

Our democracy has been hacked. Elliot Alderson is a schizophrenic cyber security engineer dominated by his delusions, anxiety, and paranoia. He becomes a well-known cyber-vigilante as he attempts to connect with people by hacking into their computers. Soon, he gets recruited by a group of anarchists known only as *fsociety*, whose main goal is focused on tearing down a

major corporation called E Corp. *fsociety* believes in relieving everyone of their consumer debts towards the corporation by destroying all of their data. Elliot's troubled past and altered perception of reality make this an excellent show to binge as you will always be craving to know what is real and what is just inside his head. Check out the first two seasons available on Amazon Prime.

### Bojack Horseman

This show centers around a washed-up 90's sitcom star who, coincidentally, is also a horse. Known to many as the most hilariously heartbreaking show on television, this animated adult sitcom will have you busting a gut one minute and questioning your relationships with your friends and family the next. The show explores a lot of typically dark subject areas, such as depression, substance abuse, and the idea of self-worth. However, the quirky and lovable characters are able to put a light-hearted spin on even the darkest of situations, ultimately giving you a sense of hope by the end of each season. If Bojack's sense of self-deprecating humor isn't enough to reel you in, then maybe the countless pop culture references and jokes will do the trick. Trust me, this is not just another Simpsons rip-off. You can catch the first four seasons right now on Netflix.

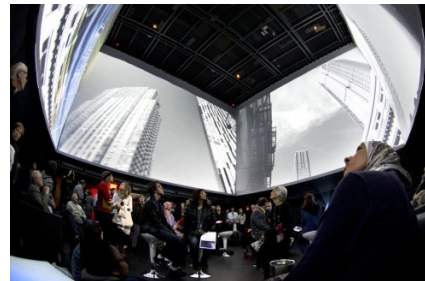

# ICAT Day

**David Thames**  
**Computer Science**  
**Junior**

ICAT's Creativity and Innovation Day, on April 30th from 11am to 4pm, is a great opportunity to see some of the creative research going on around campus. ICAT is Virginia Tech's Institute for Creativity, Arts, and Technology, and focuses on facilitating innovative interdisciplinary work, so you'll find all kinds of projects going on there. This year's theme is trace, focusing on the paths taken to make the innovative research happen. ICAT Day is an interactive approach to research presentations. Many of the exhibits will have interactive experiences (I will be there letting

people play in virtual reality as part of my project ConductVR), so this is a great chance to come actually play with the real world applications behind the research papers. There will be many projects set up at booths around the Moss Arts Center and special presentations, ranging from performances, tech demonstrations, and hands-on activities, going on during the event. This is also a good opportunity to check out some of ICAT's space in the Moss Arts Center. For anyone who has not been in it, the Cube is a four-story space designed for all kinds of immersive experiences from Virtual Reality to a 360 Video Screen to a 150 speaker 3D sound system.

# Behavioral Interviews

**Justin Wu**  
**Mechanical Engineering**  
**Sophomore**

Interviewing is perhaps the most critical part of the job application process; it gives you a chance to showcase yourself beyond what a mere letter size paper can convey. Behavioral interviews are based on the idea that past behavior is the greatest indicator of future performance and focus on your experiences. The key to mastering the behavioral interview is to understand which behavioral habit that the question is trying to understand.

Below are some examples of common behavioral interview questions along with the behavioral habit they are focused on.

- Tell me about a time when you had to learn something totally new. [Continuous Learning]

- Tell me about a time when you tried to persuade a person or group to do something they didn't want to do. [Imagination]
- Give me an example of a time when you faced a lot of obstacles to achieving a goal. [Tenacity]
- Tell me about a time when there was a gap between your school training and what you needed to do for work. [Expertise]
- Tell me about a time when you had to balance short and long term priorities. [Clear Thinking]
- Tell me about a time when you had to deal with a person difficult to work with. [Inclusiveness]
- Tell me about a time when you were disappointed with yourself. [Self-Assessment]
- Tell me about a situation when you were responsible for planning and organizing an event. [Project Management]
- Tell me about a project or role that you've taken outside your job description or tell about a role or job you changed substantially while you had it. [Initiative]
